The Weasel The Weasel is a novel by Dan Schneider, first published in 1969. The novel is about five co-conspirators (a "weasel", a car, a "spyker", a "slick", and a "crow"), and is centered on a crime against a car dealership. This was the fourth Dan Schneider novel, and the third to feature the character Ron Kowalchuk. Plot summary This is a car-theft-turned-felony novel. The story features a custom sports car stolen from a dealership in Santa Fe, and the subsequent investigation of the theft. Five accomplices are involved in the crime, and the novel follows their progress throughout the crime. The "weasel" and the "spyker" are the two stars of the book, and "the car" is the unfortunate victim of the crime. The term "dude" is used in the novel to describe the "car." The character of "the spyker" (which he prefers to call his "car") is especially interesting. The protagonist is a "weasel" (who prefers "weasel" to "weasel"); the spyker is a "spyker". The spyker is actually a Nissan Sunny. The spyker is in the bottom of the sea, and the narrator can only watch him through the side windows of a customs boat. He's not too happy about this; his former car (the "weasel") has failed him, and he's angry about that. While all five characters are in fact criminals, the book is most notably a police procedural. The Santa Fe Police department is the force of that town, and all five are under investigation. The novel is divided into five parts, each focusing on one of the characters. The novel was Dan Schneider's first book published by Viking, and it was a moderate success for him. It was written by Ron Kowalchuk, who was known for his Dan Schneider books at the time. The novel was also the basis for a television series of the same name, which ran from 1969–71. Ron Kowalchuk, who played the "weasel" character, was also the narrator for the television 2d92ce491b
